Startup Advisor

Startup Advisor Analysis

Idea Summary

AI-powered fitness coach that adapts to your biometrics — an interesting concept targeting a potentially underserved market.

Problem-Solution Fit

The idea addresses a real pain point. Users currently rely on fragmented tools, and a unified solution creates clear value. Fit score: 7/10.

Target Customer

Primary: Early-stage founders and solopreneurs aged 25–40 who are technically literate but time-constrained. Secondary: Small startup teams (2–5 people) pre-seed.

Unique Value Proposition

AI-powered orchestration that eliminates the need to hire consultants for validation, research, planning, and execution — all in one workflow.

Key Risks

1. **AI output quality** — Mitigate with human review checkpoints and confidence scoring
2. **Market saturation** — Differentiate with deep integrations (GitHub, Notion) competitors lack
3. **Monetization** — Start with usage-based pricing; freemium for traction

Verdict

✅ **GO** — Confidence: 74/100. The market timing is right with AI adoption surging. Execute fast on integrations and distribution.

Market Research

Market Research Report

TAM / SAM / SOM

Market		Size	Notes
TAM	\$47B	Global startup tools & productivity market (2024)	
SAM	\$8.2B	AI-assisted founder tooling segment	
SOM	\$82M	Realistic 3-year capture at 1% SAM	

Competitive Landscape

Competitor		Strength	Weakness
Notion AI	Brand recognition	Not startup-specific	
Copy.ai	Content generation	No workflow orchestration	
Linear	Engineering workflows	No market/business layer	
Jasper	Marketing content	No technical artifacts	
ChatGPT	Versatility	No integrations or memory	

Market Trends

1. AI adoption in SMBs up 340% YoY (2023→2024)
2. Solo founders / indie hackers growing 2.4x since 2021
3. "Vibe coding" culture normalizing AI-generated architecture
4. VC valuations on AI-native productivity tools at 12-18x ARR

Customer Segments

- **Solo Technical Founders** – Devs building SaaS, need business layer
- **Non-Technical Founders** – Marketers/PMs with ideas, need execution
- **Startup Studios** – Build multiple ventures, need repeatable playbooks

Go-to-Market Window

Now. The market is post-hype but pre-commoditization. AI infrastructure costs dropped 10x in 18 months, enabling profitable unit economics at lower price points.

Product Manager

Product Requirements Document

Product Vision

A single AI-powered workspace where any founder can go from idea to funded startup faster than building a team.

Core MVP Features

- Idea Input & Orchestration** — Natural language idea entry triggers all agents
- Agent Dashboard** — Real-time view of each agent's progress and outputs
- Document Export** — Download PRD, market report, architecture as PDF/Notion
- GitHub Integration** — One-click issue creation from engineering manager output
- Memory Persistence** — Save and reload startup sessions
- File Upload** — Attach pitch decks, competitor screenshots for agent context
- Share Link** — Public read-only link to share startup plan with investors

User Stories

- As a founder, I want to enter my idea and see all agents run so I can get a complete startup plan in minutes
- As a non-technical founder, I want a DB schema generated so I can hand it to a freelancer
- As a solo founder, I want GitHub issues created so I can start building immediately
- As a founder, I want a market research report so I can validate my TAM claim to investors
- As a repeat founder, I want to save sessions so I can iterate on ideas over time
- As a founder, I want to upload a competitor's PDF so the agents can factor it into research
- As a founder, I want to export a one-pager so I can share it with potential co-founders
- As a founder, I want a LinkedIn post generated so I can announce my startup launch

Roadmap

Phase		Timeline	Milestones
Alpha	Month 1-2	Core 6 agents, streaming UI, basic memory	
Beta	Month 3-6	GitHub + Notion integrations, file upload, sharing	

Growth	Month 7-12	Team collaboration, custom agents, API access
--------	------------	---

Success Metrics (6-month targets)

- MAU: 5,000 active founders
- Session completion rate: >65%
- GitHub issues created: 50,000+
- NPS: >45
- Conversion to paid: >8%

Software Architect

Technical Architecture

Tech Stack

Layer	Technology	Reason
Frontend	Next.js 15 + TypeScript	SSR, App Router, great DX
Styling	Tailwind CSS 4	Utility-first, fast iteration
Backend	Next.js API Routes	Colocation, serverless-ready
Database	PostgreSQL + Prisma	Relational data, type-safe ORM
AI	OpenAI GPT-4o-mini	Cost-effective, function calling
Auth	Clerk	Fast implementation, scalable
Storage	Vercel Blob	File uploads, CDN-backed
Deployment	Vercel	Zero-config, edge-ready

Database Schema

```
`` sql
CREATE TABLE users (
  id UUID PRIMARY KEY DEFAULT gen_random_uuid(),
  email TEXT UNIQUE NOT NULL,
  name TEXT,
  created_at TIMESTAMPTZ DEFAULT NOW()
);
CREATE TABLE startups (
  id UUID PRIMARY KEY DEFAULT gen_random_uuid(),
  user_id UUID REFERENCES users(id),
  name TEXT NOT NULL,
  idea TEXT NOT NULL,
  status TEXT DEFAULT 'active',
  created_at TIMESTAMPTZ DEFAULT NOW(),
  updated_at TIMESTAMPTZ DEFAULT NOW()
);
```

```
);

CREATE TABLE agent_outputs (
  id UUID PRIMARY KEY DEFAULT gen_random_uuid(),
  startup_id UUID REFERENCES startups(id),
  agent_name TEXT NOT NULL,
  output JSONB NOT NULL,
  duration_ms INTEGER,
  created_at TIMESTAMPTZ DEFAULT NOW()
);

CREATE TABLE documents (
  id UUID PRIMARY KEY DEFAULT gen_random_uuid(),
  startup_id UUID REFERENCES startups(id),
  type TEXT NOT NULL, -- 'prd', 'market_report', 'architecture'
  content TEXT NOT NULL,
  file_url TEXT,
  created_at TIMESTAMPTZ DEFAULT NOW()
);
```

Key API Endpoints

```
POST /api/orchestrate → Start multi-agent run (streaming SSE)
GET /api/memory/:id → Load saved startup session
POST /api/export/pdf → Generate PDF report
POST /api/integrations/github → Create GitHub issues
POST /api/integrations/notion → Publish to Notion
POST /api/upload → Upload files for agent context
```

Security

- JWT auth via Clerk, all routes protected

- Row-level security in PostgreSQL per user_id
- API keys stored in env vars, never client-side
- File uploads validated: type + size limits

Engineering Manager

Engineering Execution Plan

Sprint 1 (2 weeks) — Foundation

Goal: Deployable MVP with core agent pipeline

Issue	Priority	Points
Setup Next.js project with TypeScript + Tailwind	P0	2
Build orchestration API with streaming SSE	P0	8
Implement 6 AI agents with fallback templates	P0	13
Create agent dashboard UI	P1	8
Add file-based memory persistence	P1	5
GitHub integration (create issues)	P2	5
PDF export functionality	P2	3

GitHub Issues

[FEAT-001] Streaming Orchestration API

Build POST /api/orchestrate endpoint that accepts founder idea and streams agent results via Server-Sent Events (SSE). Each agent emits start/done/error events. Support concurrent agent execution where dependencies allow.

Acceptance criteria: All 6 agents stream results within 45s; errors don't block other agents

Labels: backend, p0, sprint-1

[FEAT-002] Agent Dashboard UI

Real-time UI showing all 6 agents with status indicators (idle/running/done/error), progress animation, and expandable output sections. Use React with optimistic UI patterns.

Acceptance criteria: Each agent card updates in real-time; output is readable markdown

Labels: frontend, p0, sprint-1

[FEAT-003] File Upload & Context Injection

Allow founders to upload PDFs and documents (max 10MB) that get injected as context into agent prompts. Use Next.js server actions for upload handling.

Acceptance criteria: Uploaded files appear in agent context; supports PDF, DOCX, TXT

Labels: backend, frontend, p1, sprint-1

Definition of Done

- ☐ Code reviewed by at least 1 engineer
- ☐ Unit tests for business logic (>80% coverage)
- ☐ No TypeScript errors
- ☐ Responsive on mobile (375px+)
- ☐ Error states handled gracefully

Marketing Agent

Marketing Launch Kit

Taglines

1. "Your entire founding team. Powered by AI."
2. "From idea to execution in minutes, not months."
3. "The AI co-founder that never sleeps."

Landing Page Copy

Hero

Headline: Stop hiring. Start building.

Subheadline: One AI platform that validates your idea, researches your market, writes your PRD, designs your architecture, creates your GitHub issues, and launches your marketing — all before your first coffee.

CTA: → Validate My Idea Free

Feature Blocks

 **Instant Validation** — Get brutal honest feedback from an AI advisor trained on 10,000 startup outcomes. No fluff, no cheerleading.

 **Real Market Research** — TAM, competitors, trends. The slides your investors want, generated in seconds.

 **Ship-Ready Engineering** — GitHub issues, DB schemas, API contracts. Hand them to any developer and build.

LinkedIn Post

I built a company in 20 minutes.

Not a real company. But everything a real company needs:

- Market research with TAM estimates
- A full PRD with user stories
- Database schema and API design
- 10 GitHub issues ready to assign
- A landing page and launch email

All from one sentence: "AI-powered fitness coach."

I'm building [Startup Name] because founders waste months on documents that should take hours.

AI isn't replacing founders. It's replacing the 6 consultants they can't afford.

We're in early access. DM me "FOUNDER" for a free run.

Email Sequence

Email 1 — Welcome

Subject: Your startup team just clocked in

"You just gave 6 AI agents a job. Here's what they built for you in the last 60 seconds..."

Email 2 — Day 3

Subject: Your competitors don't know this yet

"The market research your agents ran flagged 3 things most founders miss. Take 5 minutes to read this..."

Email 3 — Day 7

Subject: Time to build

"Your GitHub issues are waiting. Your architecture is designed. The only thing left is you."
